See [Important Reminder](#) at the end of this policy for important regulatory and legal information.

Description

Intravenous fluorescein angiography or fluorescent angiography is a technique for examining the circulation of the retina and choroid using a fluorescent dye and a specialized camera. It involves injection of sodium fluorescein into the systemic circulation, and then an angiogram is obtained by photographing the fluorescence emitted after illumination of the retina with blue light at a wavelength of 490 nanometers. This policy describes the medical necessity guidelines for fluorescein angiography.

Policy/Criteria

- I. It is the policy of health plans affiliated with Centene Corporation[®] (Centene) that fluorescein angiography is **medically necessary** for the following indications:
 - A. Initial evaluation of a patient with abnormal findings of the fundus / retina on ophthalmoscopy exam including one of the following:
 1. Choroidal neovascular membranes
 2. Lesions of the retinal pigment epithelium (RPE)
 - a. Serous Detachment of the RPE
 - b. Tears or rips of the RPE
 - c. Hemorrhagic detachment
 3. Fibrovascular disciform scar
 4. Vitreous hemorrhage (patient presents with sudden loss of vision)
 5. Drusen
 6. Diabetic retinopathy
 - B. Evaluation of patient presenting with symptoms of sudden vision loss (especially central vision), blurred vision, distortion, etc., which may suggest a subretinal neovascularization and abnormal findings of the fundus / retina on ophthalmoscopy exam.
 - C. Evaluation of patients with nonproliferative (background) and proliferative diabetic retinopathy without macular edema. Frequency is determined by disease progression and the treatment performed. Fluorescein angiography may be performed on the treated eye only at 6 weeks post-treatment and as often as every 8-12 weeks to assist in management of the retinopathy.
 - a. Background retinopathy is characterized by intraretinal microaneurysms, hemorrhages and hard exudates
 - b. Proliferative retinopathy is characterized by neovascularization arising from the disk or the retinal vessels
 - D. Evaluation of patients with chorioretinitis, chorioretinal scars of choroidal degeneration, dystrophies, hemorrhage and rupture or detachment
 - E. Evaluation of patients with known retinal or macular disorders such as:
 - a. Age-related macular degeneration
 - i. Nonexudative – every 6 to 12 months
 - ii. Exudative

CLINICAL POLICY

Fluorescein Angiography

- a) 1 to 2 weeks, 1 month, 6 weeks post photocoagulation
 - b) Then every 6 to 12 months
 - b. Macular edema
 - c. Cystoid macular edema
 - d. Central retinal vein occlusion
 - e. Branch retinal vein occlusion
 - f. Tumors of the choroid and retina
 - g. Retinal arterial disease
- F. Evaluation of patients with ocular tumors, visual loss in systemic disease and optic disc disease

Background

Fluorescein angiography plays an important role in ophthalmoscopic diagnosis, especially the diagnosis and evaluation of many retinal conditions. Because it can precisely delineate areas of abnormality, it is an essential guide for planning laser treatment of retinal vascular disease. Following the intravascular administration of a contrast solution of sodium fluorescein, a blue light is used to excite the fluorescein that is useful in detecting leaking capillaries (subretinal neovascularization). A permanent record of the study is always made using either photographic or electronic imaging methods. Multiple black and white photographs of the ocular fundus at different times following fluorescein injection provides much information concerning vascular obstructions, neovascularization, microaneurysms, abnormal capillary permeability and defects of the retinal pigment epithelium. Normal values of a fluorescein angiogram include normal retinal vessels, retina, and choroidal circulation. The test uses the dye tracing method.

- Baseline color and black and white red-free filtered images are taken prior to injection. The black and white images are filtered red-free (a green filter) to increase contrast and often gives a better image of the fundus than the color image.
- A 6 second bolus injection of 2-5cc of sodium fluorescein into a vein in the arm or hand.
- A series of black-and-white or digital photographs are taken of the retina before and after the fluorescein reaches the retinal circulation (approximately 10 seconds after injection). The early images allow for the recognition of autofluorescence of the retinal tissues. Photos are taken approximately once every second for about 20 seconds, then less often. A delayed image is obtained at 5 and 10 minutes. Some doctors like to see a 15 minute image as well.
- A filter is placed in the camera so only the fluorescent, yellow-green light (530 nm) is recorded. The camera may however pick up signals from pseudofluorescence or autofluorescence. In pseudofluorescence, non-fluorescent light is imaged. This occurs when blue light reflected from the retina passes through the filter. This is generally a problem with older filters, and annual replacement of these filters is recommended. In autofluorescence, fluorescence from the eye occurs without injection of the dye. This may be seen with optic nerve head drusen, astrocytic hamartoma, or calcific scarring.
- Black-and-white photos give better contrast than color photos, which are not necessary since only one color is being transmitted through the filter.

Coding Implications

This clinical policy references Current Procedural Terminology (CPT[®]). CPT[®] is a registered trademark of the American Medical Association. All CPT codes and descriptions are copyrighted 2018, American Medical Association. All rights reserved. CPT codes and CPT descriptions are

Important Reminder

This clinical policy has been developed by appropriately experienced and licensed health care professionals based on a review and consideration of currently available generally accepted standards of medical practice; peer-reviewed medical literature; government agency/program approval status; evidence-based guidelines and positions of leading national health professional organizations; views of physicians practicing in relevant clinical areas affected by this clinical policy; and other available clinical information. The Health Plan makes no representations and accepts no liability with respect to the content of any external information used or relied upon in developing this clinical policy. This clinical policy is consistent with standards of medical practice current at the time that this clinical policy was approved. “Health Plan” means a health plan that has adopted this clinical policy and that is operated or administered, in whole or in part, by Centene Management Company, LLC, or any of such health plan’s affiliates, as applicable.

CLINICAL POLICY

Fluorescein Angiography

The purpose of this clinical policy is to provide a guide to medical necessity, which is a component of the guidelines used to assist in making coverage decisions and administering benefits. It does not constitute a contract or guarantee regarding payment or results. Coverage decisions and the administration of benefits are subject to all terms, conditions, exclusions and limitations of the coverage documents (e.g., evidence of coverage, certificate of coverage, policy, contract of insurance, etc.), as well as to state and federal requirements and applicable Health Plan-level administrative policies and procedures.

This clinical policy is effective as of the date determined by the Health Plan. The date of posting may not be the effective date of this clinical policy. This clinical policy may be subject to applicable legal and regulatory requirements relating to provider notification. If there is a discrepancy between the effective date of this clinical policy and any applicable legal or regulatory requirement, the requirements of law and regulation shall govern. The Health Plan retains the right to change, amend or withdraw this clinical policy, and additional clinical policies may be developed and adopted as needed, at any time.

This clinical policy does not constitute medical advice, medical treatment or medical care. It is not intended to dictate to providers how to practice medicine. Providers are expected to exercise professional medical judgment in providing the most appropriate care, and are solely responsible for the medical advice and treatment of members. This clinical policy is not intended to recommend treatment for members. Members should consult with their treating physician in connection with diagnosis and treatment decisions.

Providers referred to in this clinical policy are independent contractors who exercise independent judgment and over whom the Health Plan has no control or right of control. Providers are not agents or employees of the Health Plan.

This clinical policy is the property of the Health Plan. Unauthorized copying, use, and distribution of this clinical policy or any information contained herein are strictly prohibited. Providers, members and their representatives are bound to the terms and conditions expressed herein through the terms of their contracts. Where no such contract exists, providers, members and their representatives agree to be bound by such terms and conditions by providing services to members and/or submitting claims for payment for such services.

Note: For Medicaid members, when state Medicaid coverage provisions conflict with the coverage provisions in this clinical policy, state Medicaid coverage provisions take precedence. Please refer to the state Medicaid manual for any coverage provisions pertaining to this clinical policy.

Note: For Medicare members, to ensure consistency with the Medicare National Coverage Determinations (NCD) and Local Coverage Determinations (LCD), all applicable NCDs, LCDs, and Medicare Coverage Articles should be reviewed prior to applying the criteria set forth in this clinical policy. Refer to the CMS website at <http://www.cms.gov> for additional information.
