**IMPORTANT REMINDER**

This Clinical Policy has been developed by appropriately experienced and licensed health care professionals based on a thorough review and consideration of generally accepted standards of medical practice, peer-reviewed medical literature, government agency/program approval status, and other indicia of medical necessity.

The purpose of this Clinical Policy is to provide a guide to medical necessity. Benefit determinations should be based in all cases on the applicable contract provisions governing plan benefits (“Benefit Plan Contract”) and applicable state and federal requirements including Local Coverage Determinations (LCDs), as well as applicable plan-level administrative policies and procedures. To the extent there are any conflicts between this Clinical Policy and the Benefit Plan Contract provisions, the Benefit Plan Contract provisions will control.

Clinical policies are intended to be reflective of current scientific research and clinical thinking. This Clinical Policy is not intended to dictate to providers how to practice medicine, nor does it constitute a contract or guarantee regarding results. Providers are expected to exercise professional medical judgment in providing the most appropriate care, and are solely responsible for the medical advice and treatment of members.

**SUBJECT:**

Medical necessity determination for performance of visual field testing.

**DESCRIPTION:**

A visual field acuity test is a painless test that determines how well a person can see. The test maps central vision as well as peripheral (side) vision. The test is performed by a duly licensed eye care provider and is used to detect areas of vision loss (blind spots) caused by a brain tumor, stroke, glaucoma, diabetes, hypertension, or head trauma. It can also be used to monitor the progression of previously known visual field loss.

The area of vision loss gives clues as to where in the visual pathway a problem has occurred. Vision begins with special receptors at the back of the eye in the

<b>PRODUCT TYPE: All</b>	<b>COMMITTEE APPROVAL: 01/09/2018</b>

retina. The image captured by each eye is sent to the brain by the optic nerves. When the nerves reach the optic chiasm, they cross over each other. The nerve fibers from the inside half of each retina cross to the other side of the brain, while the nerve fibers from the outside half of the retina stay on the same side of the brain. At the end of the optic nerve, the optic radiations send the images to the occipital lobe at the back of the brain. The area where vision is interpreted is called the primary visual cortex.

Visual field loss, also known as “visual field cut,” can be partial or complete. For example, it can range from a nearly complete loss of peripheral vision to a small area of partial loss. People with visual field loss may have trouble seeing objects out of the corner(s) of their eyes, lose their place while reading, startle when people or objects move toward them, or bump into people and objects. A visual field test can also tell the ophthalmologist and surgeon whether a lesion is located in front of, on, or behind the optic chiasm. Such information is used to help plan the patient’s surgery and to establish a vision baseline that can be referred to for comparison after brain surgery.<sup>1</sup>

**POLICY/CRITERIA:**

Envolve Vision Benefits, Inc. (Envolve Vision) covers visual field testing when medically indicated and documented in accordance with this policy. Medical record documentation must clearly indicate the medical necessity of the visual field testing, as well as the frequency of such testing. The results of the visual field test as well as the interpretation and report must be maintained in the patient’s medical record. Lack of documentation will result in denial or, if payment has already been made, recovery of funds will be initiated.

Envolve Vision will consider reimbursement for a visual field examination for the evaluation and/or treatment of abnormal ophthalmologic or neurological signs, and/or symptoms, and/or known ophthalmologic disease or injuries. Specifically, visual field examinations will be considered medically necessary when the patient has any of the following conditions:

- Disorder of the eyelids potentially affecting the visual field
- Documented diagnosis of advanced glaucoma
  - Glaucoma suspect as evidenced by an increase in intraocular pressure over time, asymmetric intraocular measurements of greater than 2-3 mm Hg between the two eyes, or has optic nerves suspicious for glaucoma which may be manifested as asymmetrical cupping, disc hemorrhage, or an absent or thinned temporal rim
- Documented disorder of the optic nerve, neurologic pathway or retina
- Recent intracranial hemorrhage, mass or increased intracranial pressure
- Recently documented occlusion and/or stenosis of cerebral/precerebral arteries, recently diagnosed transient cerebral ischemia or giant cell arteritis
- History of cerebral aneurysm, pituitary tumor, occipital tumor or other condition affecting the visual fields
- Visual field defect demonstrated by gross visual field testing
- Initial workup for buphthalmos, congenital anomalies of the posterior segment or congenital ptosis
- Disorder of the orbit, potentially affecting the visual field
- Recently sustained significant eye injury
- Unexplained visual loss (may be described as vision going in and out)
- Pale or swollen optic nerve documented by a recent examination
- New functional limitations which may be due to visual field loss (reports that patient is running into things)
- Use of medication that has a high risk of potentially affecting the visual system (e.g. Plaquenil)
- Initial evaluation for macular degeneration related to central vision loss or has experienced such loss resulting in vision measured at or below 20/70

The medical record must clearly indicate the reason for the diagnostic test and how it will aid in clinical decision-making. An interpretation and report must be included as a permanent part of the medical record. When multiple diagnostic tests are performed, a separate interpretation and report must be completed for

<b>PRODUCT TYPE: All</b>	<b>COMMITTEE APPROVAL: 01/09/2018</b>

each test. The interpretation and report may be included with the encounter documentation; however, must be separate from an examination.

The interpretation and report must contain the following:

- Clinical findings – pertinent findings regarding the test results
- Comparative Data – comparison to previous test results (if applicable)
- Clinical Management – how the test results will affect management of the condition/disease
  - Change/increase/stop medication
  - Recommendation for surgery
  - Recommendation for further diagnostic testing
  - Referral to a specialist/sub-specialist for additional treatment

Limitations:

Envolve Vision reimburses one visual field examination annually (service date to service date) for glaucoma diagnoses (H40.xx). Visual field testing is not covered when performed at the same encounter as scanning computerized ophthalmic diagnostic imaging (SCODI) (CPT 92132, 92133, 92134).

Gross visual field testing (e.g., confrontation testing) is a part of general ophthalmological services and should not be reported separately.

Patients with a previously diagnosed retinal detachment do not need a pretreatment visual field examination. In patients who are about to undergo cataract extraction, who do not have glaucoma and are not glaucoma suspects, a visual field is not medically indicated.

Frequency of examinations for a diagnosis of macular degeneration or an experienced central vision loss (or to evaluate the results of a surgical intervention or for the possible need for surgical intervention) is dictated by stage of disease or degree of risk factors.

**AUTHORIZATION PROTOCOLS:**

Visual field testing is subject to retrospective medical record review.

Professional services provided by duly licensed eye care providers must be within the scope of licensure as defined by applicable State guidelines.

**SCIENTIFIC BACKGROUND:**

The advent of automated perimetry began around 1970 with the automated perimeter developed by Drs. John Lynn and George Tate, which was significantly augmented by the development of the Octopus perimeter in the laboratory of Dr. Fankhauser and co-workers. Following many attempts to develop this procedure, Fankhauser and co-workers were able to achieve the first fully automated visual field device known as the Octopus perimeter. Although it has undergone many changes since it was first invented, the Octopus perimeter is still commercially available approximately 40 years later. Many other automated and semiautomated perimeters followed (e.g., the Fieldmaster, DICON, BIO-RAD, Humphrey Field Analyzer, and numerous other devices). Currently, the Fieldmaster, Humphrey Field Analyzer, Humphrey Matrix, Octopus, Easyfield (Oculus), and Medmont automated perimeters are available, as well as additional devices that are not as commonly used throughout the world.

In recent times, there have been many different approaches and innovations related to perimetry and visual field testing. The main emphases of these new procedures have been directed toward development of procedures to improve accuracy, enhance efficiency, provide easier tests to administer and perform, isolate and measure the status of subsets of visual mechanisms, and establish robust and informative clinical diagnostic tools for detection, differential diagnosis, and follow-up of patients. Many of these new testing methods have not provided a lasting positive impression for routine clinical use. Listed below (in alphabetical order) are brief descriptions of the perimetric tests that have provided helpful clinical information.<sup>2</sup>

**CODING IMPLICATIONS:**

The following codes for treatment and procedures are for informational purposes only. They are current at time of review of this policy. Inclusion or exclusion of any codes does not guarantee coverage. Please refer to your State contract or applicable National and Local Coverage Determinations for exact coverage implications.

Visual fields are bilateral; therefore the 50 modifier is not necessary. The number of service units should be reported as one (1). If performed on one eye only, a visual field should be modified with modifier 52, reduced services.

Envolve Vision follows National Correct Coding Initiative (CCI) guidelines in processing claims for these services. If a claim is denied based upon CCI edits, an appeal must be submitted Envolve Vision with a letter signed by the provider indicating the necessity of performing multiple services at the same encounter and the medical records clearly stating what additional information will be gleaned and how these multiple images will positively impact the patient’s care.

Envolve Vision follows the Multiple Procedure Payment Reduction guidelines (MPPR) when reimbursing for multiple diagnostic procedures. CCI guidelines are applied prior to MPPR.

Visual Field Examinations are to be reported with the following CPT codes:

- **92081** – Visual field examination, unilateral or bilateral, with interpretation and report; limited examination (eg, tangent screen, Autoplot, arc perimeter or single stimulus level automated test, such as Octopus 3 or 7 equivalent);
- **92082** – visual field examination, unilateral or bilateral, with interpretation and report: intermediate examination (eg, at least 2 isopters on Goldmann perimeter, or semiquantitative, automated suprathreshold screening program, Humphrey suprathreshold automatic diagnostic test, Octopus program 33); or
- **92083** – Visual field examination, unilateral or bilateral, with interpretation and report; extended examination (eg, Goldmann visual fields with at least 3 isopters plotted and static determination within the central 30, or quantitative, automated threshold perimetry, Octopus program G-1, 32 or 42, Humphrey visual field analyzer full threshold programs 30-2, 24-2, or 30/60-2).

**Medical Indications:**

ICD-10 Code	ICD-10 Code Description
A18.53	Tuberculous chorioretinitis
A52.15	Late syphilitic neuropathy
C69.01	Malignant neoplasm of right conjunctiva
C69.02	Malignant neoplasm of left conjunctiva
C69.11	Malignant neoplasm of right cornea
C69.12	Malignant neoplasm of left cornea
C69.21	Malignant neoplasm of right retina
C69.22	Malignant neoplasm of left retina

H31.412	Hemorrhagic choroidal detachment, left eye
H31.413	Hemorrhagic choroidal detachment, bilateral
H31.421	Serous choroidal detachment, right eye
H31.422	Serous choroidal detachment, left eye
H31.423	Serous choroidal detachment, bilateral
H33.011	Retinal detachment with single break, right eye
H33.012	Retinal detachment with single break, left eye
H33.013	Retinal detachment with single break, bilateral
H33.021	Retinal detachment with multiple breaks, right eye
H33.022	Retinal detachment with multiple breaks, left eye
H33.023	Retinal detachment with multiple breaks, bilateral
H33.031	Retinal detachment with giant retinal tear, right eye
H33.032	Retinal detachment with giant retinal tear, left eye
H33.033	Retinal detachment with giant retinal tear, bilateral
H33.041	Retinal detachment with retinal dialysis, right eye
H33.042	Retinal detachment with retinal dialysis, left eye
H33.043	Retinal detachment with retinal dialysis, bilateral
H33.051	Total retinal detachment, right eye
H33.052	Total retinal detachment, left eye
H33.053	Total retinal detachment, bilateral
H33.111	Cyst of ora serrata, right eye
H33.112	Cyst of ora serrata, left eye
H33.113	Cyst of ora serrata, bilateral
H33.20	Serous retinal detachment, unspecified eye
H33.21	Serous retinal detachment, right eye
H33.22	Serous retinal detachment, left eye
H33.23	Serous retinal detachment, bilateral
H33.311	Horseshoe tear of retina without detachment, right eye

S04.012A	Injury of optic nerve, left eye, initial encounter
S04.012D	Injury of optic nerve, left eye, subsequent encounter
S04.012S	Injury of optic nerve, left eye, sequela
S04.02XA	Injury of optic chiasm, initial encounter
S04.02XD	Injury of optic chiasm, subsequent encounter
S04.02XS	Injury of optic chiasm, sequela
S04.031A	Injury of optic tract and pathways, right eye, initial encounter
S04.031D	Injury of optic tract and pathways, right eye, subsequent encounter
S04.031S	Injury of optic tract and pathways, right eye, sequela
S04.032A	Injury of optic tract and pathways, left eye, initial encounter
S04.032D	Injury of optic tract and pathways, left eye, subsequent encounter
S04.032S	Injury of optic tract and pathways, left eye, sequela
S04.041A	Injury of visual cortex, right eye, initial encounter
S04.041D	Injury of visual cortex, right eye, subsequent encounter
S04.041S	Injury of visual cortex, right eye, sequela
S04.042A	Injury of visual cortex, left eye, initial encounter
S04.042D	Injury of visual cortex, left eye, subsequent encounter
S04.042S	Injury of visual cortex, left eye, sequela
S04.11XA	Injury of oculomotor nerve right side initial encounter
S04.11XD	Injury of oculomotor nerve right side subsequent encounter
S04.11XS	Injury of oculomotor nerve right side sequela
S04.12XA	Injury of oculomotor nerve left side initial encounter
S04.12XD	Injury of oculomotor nerve left side subsequent encounter
S04.12XS	Injury of oculomotor nerve left side sequela
T37.2X5A	Adverse effect of antimalarials and drugs acting on other blood protozoa, initial encounter
T37.2X5D	Adverse effect of antimalarials and drugs acting on other blood protozoa, subsequent encounter

<b>PRODUCT TYPE: All</b>	<b>COMMITTEE APPROVAL: 01/09/2018</b>

T37.2X5S	Adverse effect of antimalarials and drugs acting on other blood protozoa, initial encounter
Z04.71	Encounter for examination and observation following alleged adult physical abuse
Z04.72	Encounter for examination and observation following alleged child physical abuse
Z09*	Encounter for follow-up examination after completed treatment for conditions other than malignant neoplasm
Z79.899*	Other long term (current) drug therapy

\*Use Z03.89 only when testing is necessary for baseline prior to initiation of high risk medication

\*Z03.89, Z09 and Z79.899 must be used in conjunction with the appropriate systemic disease.

**REVIEW/REVISION LOG**

<b>Notes</b>	<b>Date</b>
Updated diagnoses as medical indications	01/2018
Removed unspecified diagnoses for medical indications, updated diagnoses based on ICD-10 update and removed Attachment A	10/2016
Update medical indications	05/2016
Update medical indications; rebranded to Envolve Benefit Options.	12/2015
Clarification of documentation requirements; addition of Attachment A with ICD9/ICD10 code crosswalk	12/2014
Addition of lupus diagnoses	04/2014
Revised applicable diagnoses and updated references	12/2013
